EDUCATION

Indian Institute of Technology Roorkee
B.Tech in Chemical Engineering

2022 – 2026

EXPERIENCE

Product Manager Intern

Feb 2026 – Apr 2026

Orange Labs — EdTech ERP platform for schools and colleges

- Defined product requirements for **CCTV-based automated attendance pipeline** and **AI-generated personalised lecture pipeline** — improved student engagement and reduced manual attendance tracking.
- Worked directly with co-founders on product vision and feature scope from zero — developed a deep understanding of customer needs and market trends.

Software Development Intern

May 2025 – June 2025

ScoreMe Solutions

- Designed a **two-stage ML classification pipeline** for fintech PDF processing — improved accuracy and reduced manual review time.
- Implemented **confidence calibration layer** to prevent silent misclassification propagation — ensured reliable and trustworthy results.

PROJECTS

YAAR — AI Behavioral Companion | *React Native, LLM APIs, FastAPI, Persistent Memory*

2025

- Built a **persistent personality memory system** that updates a **personality metric vector** tracking dimensions (humour tolerance, self-awareness index, reaction intensity) — stored per-session and injected into the **LLM context window** at inference time to steer tone and content.
- Designed a **preference engine** that adapts LLM outputs using 3 personality dimensions tracked from tap reactions — no retraining required, purely inference-time via dynamic prompt construction.

AI Data Analyst Agent | *Python, LangGraph, CrewAI, n8n, MCP, FastAPI, Docker, AWS EC2*

2025

- Designed a **stateful 5-agent LangGraph workflow** (Query Planner → Code Writer → Executor → Error Fixer → Insight Generator) — resolved **intent ambiguity** and enforced **deterministic routing** to SQL or Python execution paths before generation.
- **Error Fixer agent** implemented **autonomous exception recovery**: intercepted runtime failures, classified error type, regenerated targeted fix, retried execution — structured escalation to operator only on unresolvable failures.

Semantic Document Search | *Python, LangChain, BGE-M3, AstraDB, FastAPI, AWS EC2*

2024

- Diagnosed keyword retrieval failure on a 500+ document corpus — introduced **hybrid retrieval** combining **BGE-M3** dense embeddings with sparse BM25 scores, improving recall on paraphrased and domain-specific queries.
- Designed **decoupled ingestion and serving**: offline embedding pipeline feeds **AstraDB** independently of the **FastAPI serving layer** on **AWS EC2** — corpus updates without serving downtime.

TECHNICAL SKILLS

LLM & Generative AI: LangGraph, LangChain, CrewAI, MCP, Agentic Workflows, Structured Outputs, Prompt Engineering

Product Management: PRD writing, funnel analysis, A/B testing, north star metrics, product decisions, tradeoff articulation

Backend & Infra: FastAPI, Docker, AWS EC2, REST APIs, Stream Processing

Languages & Data: Python, SQL (window functions, cohort queries), Java, C++, DSA, Pandas
